

Towards a global phase-down of HFCs – an EU response

Philip Owen – European Commission

Building on successful domestic policy and legislation

2006 legislation:

- ***F-gas Regulation: containment and awareness raising***
- ***Mobile air conditioning***

2010 policy:

- **Low carbon economy roadmap**

2014 legislation

- ***EU phase-down coupled with containment measures and selective placing on the market prohibitions***

International action and the Montreal Protocol

- **Keeping climate change below 2°C**
- **Low-cost mitigation**
- **Successful phase-out of ozone depleting substances**
- **G20 and others calling for the deployment of the mechanisms and institutions of the Montreal Protocol to deal with HFCs**

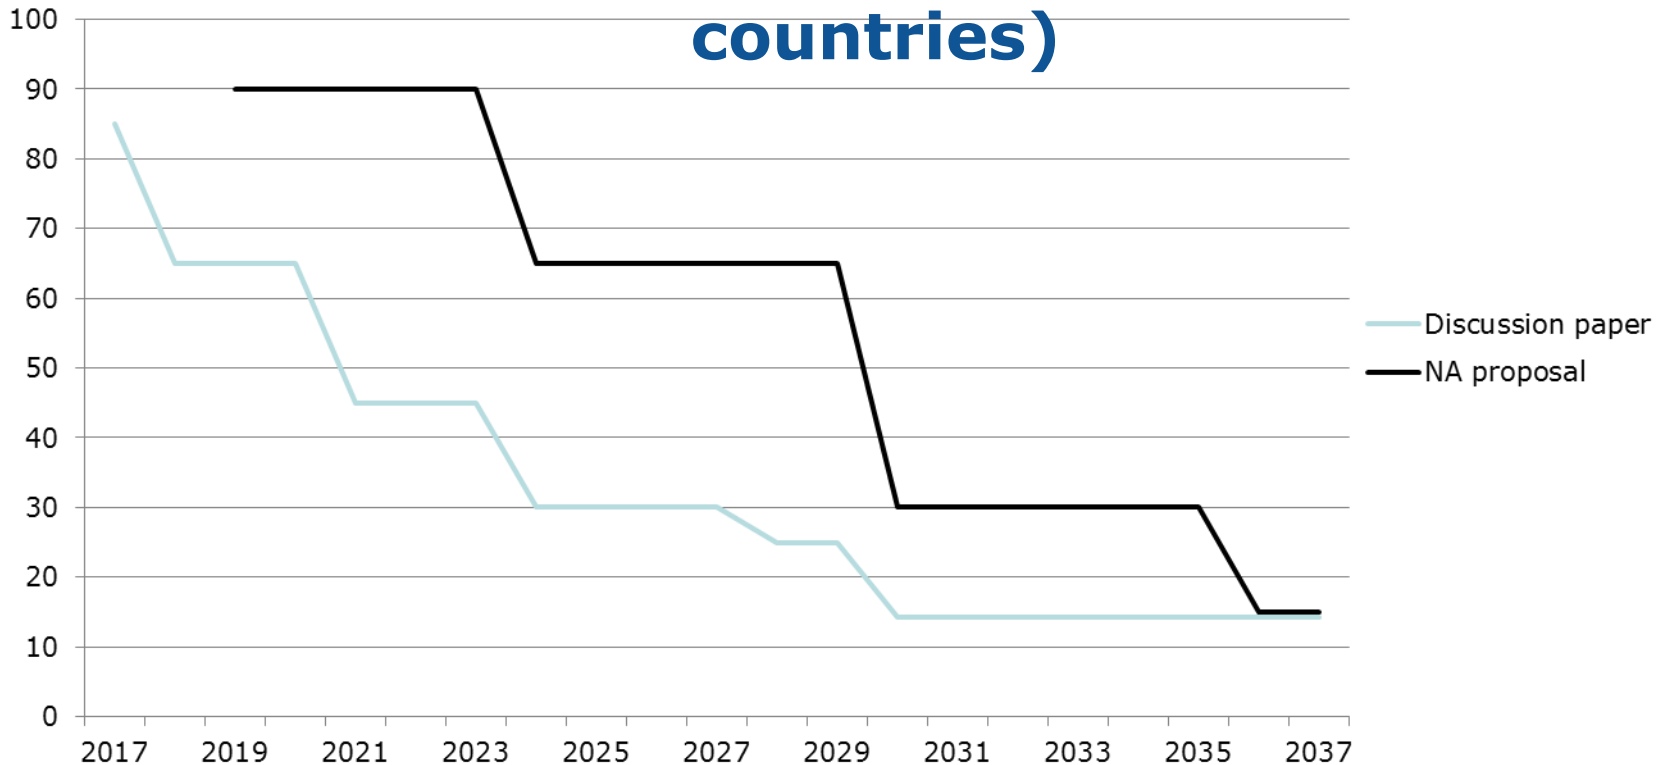

An emerging EU proposal

A challenge for developed countries with a design to stimulate innovation

A fair deal for developing countries without putting in question their phase-out of ozone depleting substances

An appropriate financial contribution where needed

Comparison of EU discussion paper and North American 2014 proposal (non-Article 5 countries)

Next steps

- ***Bangkok April 2015***
- ***Paris July 2015***
- ***Dubai October 2015***

Thank you
