## R404A VS CO<sub>2</sub> systems

Desk analysis

# Danfoss Multi Ejector Solution™ with multiple values

## Optimization of compressors

Less compressor capacity needed and the solution can control three suction groups.

## High system reliability

Ensures max uptime and high system reliability with 4-6 redundant ejectors, backup systems, and emergency operations.

## Easy installation

Reduces installation complexity with build-in strainer and connectors for both welding and soldering.

## One solution for all climates

Apply transcritical CO<sub>2</sub> refrigeration systems in all climates to ensure optimum performance – even in warmer climates.

## Service

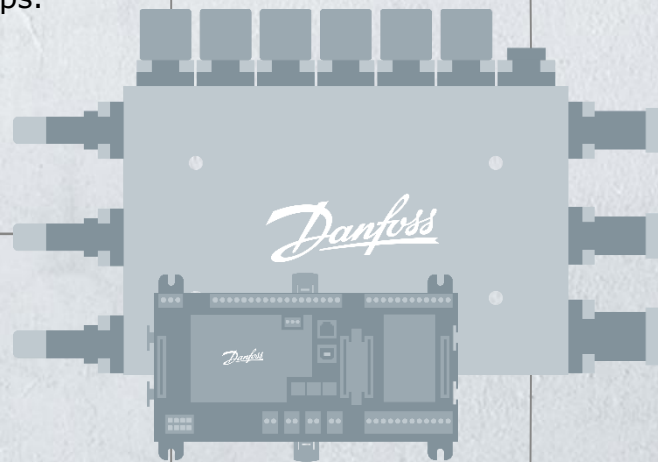

Eases service with user-friendly tools, fast operation on the strainer and ejectors, and LED plug for trouble shooting.

## Savings

Provides initial and operational savings with easy installation, reduced need for compressors, and lower energy consumption.

## How the new AK-PC 782A works

The AK-PC 782A combines the well-proven features of **up to three AK-PC 781A into one controller.**

With every **monitoring and control function in one controller, the efficiency, safety** and ease of use is taken to a new level.

A **wizard-like configuration** supports fast and easy configuration and initial start-up of the pack

– even for persons with little CO<sub>2</sub> knowledge.

With a minimum set points configuration, the controller will automatically calculate the advanced CO<sub>2</sub> set points, control and safety parameters.

## Conclusion Multi Ejector Solution™ (HP 3875/1875) in APA

**75 kW:** Multi Ejector Solution™ (HP 3875/1875) is not the optimal solution. The Low Pressure and Liquid Ejector version, fits better to smaller applications.

**150 kW:** Multi Ejector Solution™ (HP 3875/1875) is recommended – in warmer climates where payback time is less then 4 years.

**300 kW:** Multi Ejector Solution™ (HP 3875/1875) is recommended in all areas.

**STORE 75 KW**

**STORE 150 KW**

**STORE 300 KW**
